Total Sales by Year and Month

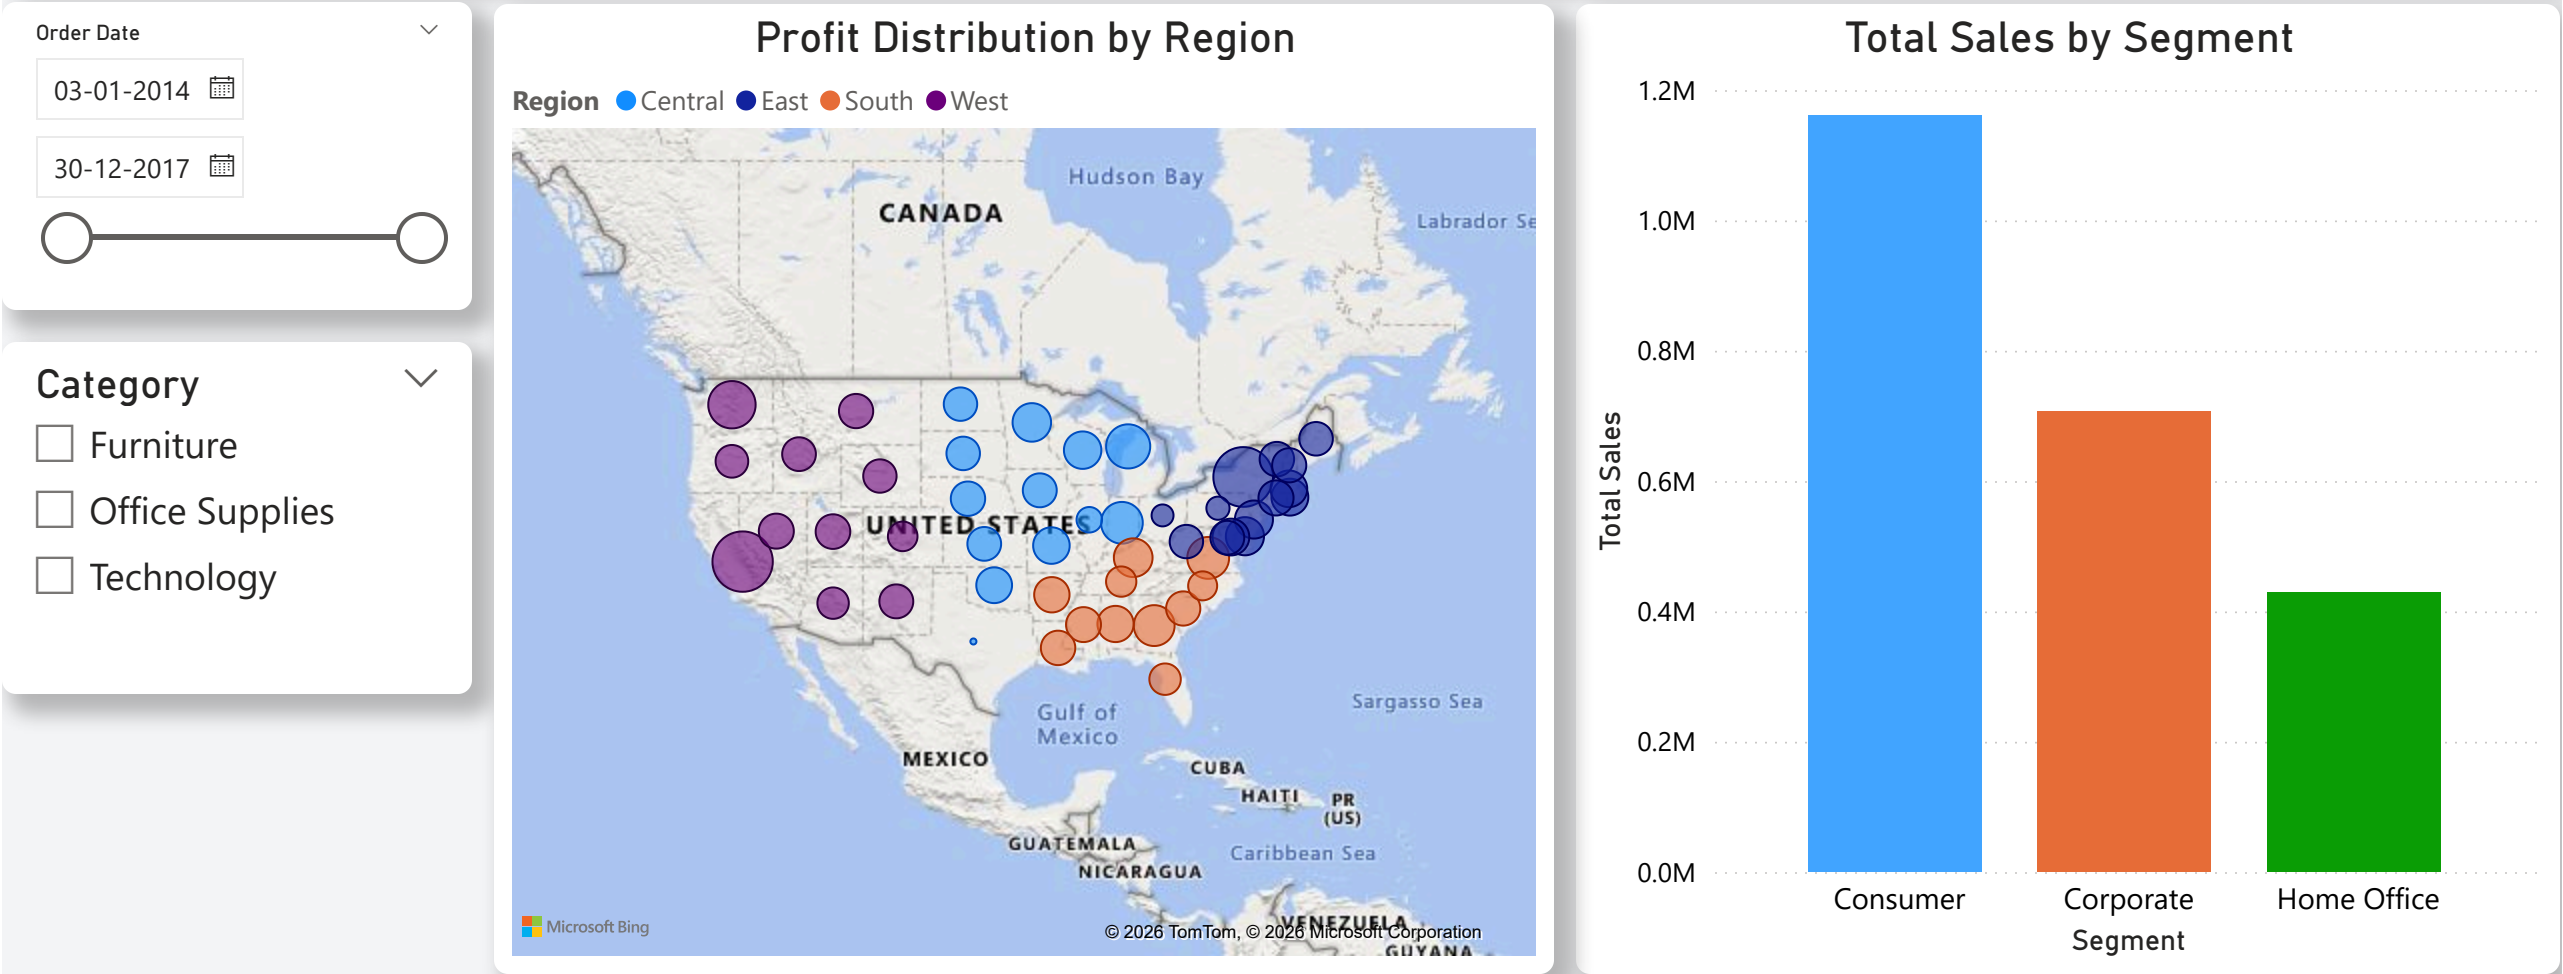

Total Sales by Category

Summary: Between 2014 and 2017, the store made **\$2.30M** in sales and **\$286.40K** in profit. Sales always go up during the end-of-year holiday season. Sales are steady across all three product groups. However, the average discount of **15.62%** means the store needs to check if too much profit is being lost.

SUPERSTORE SALES ANALYSIS

Summary: Regular customers buy the most products across all areas. States on the coast, like California and New York, make a lot of money. But there is a big profit problem in the Central region. **Texas** and **Illinois** are losing a lot of money even though they sell a large number of items.

All

Category

☐ Furniture

☐ Office Supplies

☐ Technology

Summary: Giving big discounts is hurting store profits. **Tables** are the biggest problem, losing over \$17.7K because they have a high average discount of **26.13%**. On the other hand, **Copiers** and **Phones** are doing great, making over \$100K together because their discounts are low. Stopping big discounts on furniture will help save profits.
